## I. Transport, Delivery, Storage

### Storage and transport:

Protect devices against humidity, dirt, shock and damage.

### Inspection of Delivery:

Check shipment for completeness upon receipt. Compare the data marked on the device with the data on the packing slip and the order documents.

Report any transport damage immediately after the delivery. Damages which are reported later, will not be recognized.

## II. Warranty

For the scope and period of warranty, please refer to the contractual terms of delivery.

Claims under warranty shall be conditional to expert installation and start-up in compliance with the operating instructions for the device. The required installation, start-up and servicing work may only be performed by qualified and authorized personnel.

### 1. Identification

Manufacturer: Bopp & Reuther Messtechnik  
Am Neuen Rheinhafen 4

Phone: + 49 6232 657-0  
Fax : + 49 6232 657-505

Product type: direct volumetric meters (positive displacement flow meters)

Product name: oval wheel meter series OaP with pulse pick-up AG 19/20/45 or/and mechanical counters E/D/M5

Version no.: A-EN-01221-00E

### 2. Range of Application

Quantity control of certain industrial liquids is an economic necessity considering the high value of these products. The volume measuring instruments required for these procedures must be adjusted to the particular operating conditions and the characteristics of the liquids to be measured, both with respect to design and the materials used for these instruments.

The field of application of all Oval Wheel Meters of the OI series comprises measuring, dosage, and controlling of liquids. Oval Wheel Meters of the OI series meet all of these requirements. They are used for the measurement of intermediate and final liquid products such as liquified gases, acids, alkaline solutions, fats, alcohol, solvents, dispersions, polymers, polycondensates, paints, colors, adhesives and other media.

Please note the Oval Wheel Meter's capability to measure liquids with very high viscosities with nearly no pressure loss.

The high accuracy provided by the OaP series Oval Wheel Meters ensure a maximum quality of the products being manufactured.

Oval Wheel Meters of the OaP series are manufactured with nominal widths of 25 to 400 mm. Depending on the nominal width they can be used for up to PN 100 with a maximum operating temperature of up to 290 °C.

For all Oval Wheel Meters a wide choice of accessories is available including mechanical, electrical and electronic transmitters. Their signals may be used for remote counting, flow measuring and flow control as well as for data processing systems. In addition, automatic batch control systems (with

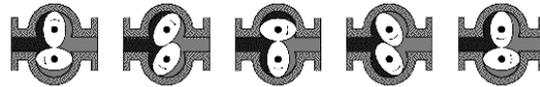

appropriate valves) of the most varied constructions and working principles are available to facilitate dosage of media.

### 3. Working Principle and System Design

#### 3.1 Measuring Principle

Oval Wheel Meters belong to the group of direct volumetric meters for liquids with movable partition walls (displacement flow meters). The Oval Wheel Meter consists of a measuring chamber housing with two pivoted oval wheels, which are toothed and roll off in counter-rotations around each other.

The diagram demonstrates the moving principle of the wheels during the flow measuring process.

Each revolution of the oval wheels displaces four discrete volumes of fluid (defined by the space between oval wheel and measuring chamber) through the counter. For measuring purposes the rotation of the oval wheel is transmitted from the pressure chamber to the outside via an electromagnetic sensor according to the Wiegand principle and processed to be available as standardized electrical signal or counter display.

#### 3.2 System design

The Oval Wheel Meter with Universal Smart Transmitter (UST) consists of the following components:

##### Transducer:

Measuring of the volumetric flow and the volume of liquids is performed by the Oval Wheel Meter.

##### Pulse pick-up AG 19 and AG 20:

Pulse pick-up AG 19 resp. AG 20 are employed to control electro-mechanical counters, read-out devices, recorders, regulators, electronic counters, data processing equipment, as well as for remote counters for printing engines using step motors. They are approved for use in oval wheel counters for fiscal metering purposes. However, pulse pick-up model AG 19 may only be used for internal metering purposes (Number of approval AG 19: 411.007; AG 20: 411.005).

##### Pulse pick-up AG 45:

The pulse pick-up AG 45 is employed to control electro-mechanical counters, read-out devices, recorders, regulators, electronic counters, data processing equipment, as well as for remote counters for printing engines using step motors. They are approved for use in oval wheel counters for fiscal metering purposes (Number of approval AG 45: 5.552/88.08).

##### Single Pointer Indicator E:

The single pointer indicator E displays the volume flow mechanically. The device is equipped with a six digit roller set (without reset). The single pointer indicator can be combined with the above mentioned pulse pick-up.

##### Double Pointer Indicator D:

The double pointer indicator D displays the volume flow mechanically. The device is equipped with a six digit roller set (with zeroing lever). The double pointer indicator can be combined with the above mentioned pulse pick-up.

##### Roller Counter M5 and further models of this type:

The roller counters M5, M5B, M5V and M5BV display the volume flow. They can be equipped with receipt printers and valve control. They can be supplied with the actuation device at the bottom (rotating), upright or diagonal. With the actuation device at the bottom, several roller counters may be mounted above the oval wheel meter. All models are available with an upright or sloping face.

für alle Klassen

The Wiegand-pre-amplifier PV 11 in connection with pulse pick-up AG 45 is designed to sense the volume pulses in oval wheel counters. Being a category 2G device it may be employed in areas of explosion hazard zone 1.

The Wiegand sensor coils of the above mentioned pulse pick-up types are "simple electrical devices" as defined by EN 60079-11:1997, sections 3.21 and 12.2.1. The explosion protection approval for the Wiegand-pre-amplifier PV 11 is thus applicable for the entire meter using one of these pulse pick-up.

The needle pulses generated in the sensor head due to the Wiegand effect are transformed during the pick-up stage by the secondary multi vibrator in pulses of 500 milliseconds width. Then follows a separation into two independent NAMUR switching-stages with signals of 180° phase shift.

## 5.1.2 Mechanical Counters of the M5 Series

### Roller Counter M5

The device is equipped with a five-digit roller set, which counts and displays the units of measurement. A sixth roller is covered. When the measuring process has been completed and the zero re-set lever has been operated, the cover opens and the value after the dash of the fifth roller is shown as a digit. After the measured value has been read out, the zero re-set lever is operated again. The rollers are reset to zero and the sixth digit is covered again. The device is ready for further measurement. An eight-digit totalizer, which cannot be re-set, adds all values displayed on the roller set at the same time.

### Roller Counter M5B with Printer

This device is used where a print-out is required in addition to the display of the quantity delivered. After any given quantity has been delivered, the re-set lever is operated. The quantity in the roller counter is now transferred to the printer and printed out on the inserted receipt. Zeroing of the combination device is also done by operating the lever. During the printing sequence, the lever is locked.

### Roller Counter M5V with Pre-Setting Device

The attachment of the pre-setting device allows the pre-setting and delivery of a five-digit quantity. It is attached to the meter M5, which is described above. Entering of the quantity is done with push-buttons after operating the zeroing lever (red marking). The setting level always corresponds to one-tenth of the cycle value of the fastest moving roller in the M5 roller counter. The set value remains during the delivery. Switching-off is performed in four stages with the numerical values of 20, 10, 3 and when the set value has been reached. Switching can be done on the right or left side of the housing. The pre-set value is preserved. This is important for the filling of cans or drums. There is a

stop button to interrupt the measuring process. By pulling the start lever again the measurement may be completed.

### **Roller Counter M5BV with Printer and Pre-Setting Device**

The roller counter M5, printer B, and pre-setting device V is a combination device and placed in one housing. Measured quantities are read out on the roller counter M5, the preparation of a printed card for the measured values are printed out in printer B, the desired quantity is pre-set in the quantity pre-setting device V.

### **IG 2 (Pulse pick-up, 2 Channels)**

for roller counters M5, M5B, M5V and M5BV

The above mentioned roller counters can be supplied with an integrated two-channel pulse pick-up. Two slot initiators of the type SJ 3,5-N (  II 2G Ex ia IIC T6) in connection with a lug disc (10 lugs) form the pulse pick-up system with an intrinsically safe control loop according to NAMUR. It is placed in the housing of the counter and driven by the coupling gearwheel. It is equipped with a reverse-run safety mechanism, which ensures that no pulses are delivered when the counter is reversing. For each scale of the fastest counter roller in the M5 roller counter one pulse is triggered per transmitter. Both pulses are delivered delayed in phase so that the second pulse is triggered in the mid of the pulse length of the first pulse.

Optionally a linking switch (KS), designed as a proximity switch according to Namur (Typ NJ 1.5-6.5-N ;  II 2G Ex ia IIC T6)) can be added.

The connecting wire is to be fixed onto the terminal box at the back of the housing.

The electrical connection data for the pulse pick-up and the linking switch are listed on the type plates on the housing.

The value of the pulse is 1/100th of the rotation value of the fastest counter roll.

### **KS (Linking Switch, Electr.)**

for roller counters M5, M5B, M5V and M5BV

### **KSP (Linking Switch, Pneum.)**

for roller counters M5B and M5BV

These additional devices are used as signal output for the operational status of the roller counter. Between the red and green marks (read out, pressure and zero position) an electrical respectively pneumatic signal is provided for the total duration. This signal may be used to stop the delivery (valve) or as an acoustic respectively visual signal. Thus unwanted delivery during the "red-phase" of the counter can be prevented or at least identified.

KS: electrical quick brake switch, Ex-protected (Ex) d3nG5, 250 V ~ 5 A, 250 V-0,4 A. Mounted in the housing onto the right side plate of roller counter M5, operated by the disconnecting coupling. Optional a proximity switch (intrinsically safe) can be provided.

KSP: Pneumatic 3/2 distributing valve; air inlet max. 8 bar; temperature range 10 to + 60°C. air inlet connections at the back of the M5B: air inlet and control air R 1/8"-female thread, mounted into the printer, operated by printing roller.

Type	Roller counter M5					Resettable Printer B		Resettable counter V

Counter data

### 5.1.3 Mechanical Single Pointer Indicator E and Double Pointer Indicator D

Both indicators (E and D) are provided with a counter that is not re-settable, so that continuous adding up (adding-up roller counter with 6 digit rollers). The double pointer indicator can optionally be equipped with a re-settable counter.

The counter head is mounted vertically, horizontally or diagonally.

Counter data

## 5.2 Electrical and Thermal Safety Specifications

see attached „EG-Baumusterprüfbescheinigungen“ (EC Type Examination)

## 6. Characteristic Parameter

### 6.1 Reference conditions

All oval wheel counters are calibrated at test benches approved for fiscal metering. Pressure: 2 to 7 bar, temperature: 20°C to 30°C

### 6.2 Measuring accuracy

Lin.  $\pm 0.05\%$  to  $\pm 0.3\%$  of the measured value (depending on product characteristics and measuring range)

### 6.3 Repeatability

< 0.02%

### 6.4 Influence of media temperature

negligible

## 7. Operating conditions

### 7.1 Installation conditions

#### 7.1.1 Installation instructions

#### Warning!

Before mounting and operating the device, carefully read the installation instructions.  
Before mounting or disassembling the device, **depressurize** and **cool down the system**.

##### 7.1.1.1 General information

- Bopp & Reuther Oval Wheel Meters are precision flow meters. Inlet and outlet are covered with protective caps against foreign substances. Only remove caps immediately before putting the device into operation.
- Observe the operating data marked on the oval wheel, the order confirmation and the configuration data sheet. If you want to use the device under different operating conditions consult Bopp & Reuther Messtechnik GmbH indicating the factory number.
- Install the Oval Wheel Meter in the pressure pipe behind the pump (approximately 3 m liquid column pressure drop for nominal flow rate).
- Install the Oval Wheel Meter in such a way that it remains filled with liquid also in non-operating condition.
- To avoid measuring inaccuracies due to gas bubbles or contamination preventive measures must be taken (e.g. gas separator or type N strainer).
- Oval Wheel Meters intended for liquid food products must be cleaned thoroughly before putting them into operation (see Maintenance and Cleaning).
- 

##### 7.1.1.2 Installation

- Flush and purge the pipe. When doing so, replace the Oval Wheel Meter with a suitable piece of piping.
- Do not remove the caps on the in- and outlet of the Oval Wheel Meter until the device is being installed to prevent ingress of foreign substances.
- The flow direction is indicated by an arrow on the housing of the Oval Wheel Meter.
- The housing cover of the Oval Wheel Meter is to be placed vertically so that the axes of the Oval Wheel are in a horizontal position independent of the position of the pipe.
- The Oval Wheel Meter must be installed free from strain.

The sensor can be used together with the pulse pick-up series AG 19/20 and AG 45 according to the protection type „intrinsically safe“ in the Ex-area.

AG 45 with pre-amplifier PV11:  II 2G Ex ib IIC T6/5/4

AG 19, AG 20 and IG 2:  II 2G Ex ia IIC T6

Linking Switch KS:  II 2G Ex ia IIC T6

EMV protection can only be granted with shielded wires. The shielding must be applied at the metal-PG-connecting bolts.

##### 7.1.2 Start-up Instructions

###### Important

- **Start-up the Oval Wheel Meter slowly increasing the flow quantity.**
- **For systems measuring viscous fluids which have to be heated the heater of the Oval Wheel Meter, the strainer and the pipe are to be switched on well ahead in time; only then the Oval Wheel Meter is to be started-up while the flow quantity is slowly increased.**

## 7.2 Environmental Conditions

### 7.2.1 Ambient Temperature

OaP with AG 19 or/and AG 20: -25 to +90°C  
 OaP with AG 45: -40 to +70°C  
 OaP with M5 series counter: -20 to +60°C  
 OaP with pointer indicator: -20 to +110°C

### 7.2.2 Storage Temperature

OaP: -25° C to +100° C  
 Pulse pick-up: -25° C to +70° C  
 Roller counter M5: -20° C to +70° C  
 Pointer indicator: -20° C to +110° C

### 7.2.3 Type of Protection

OaP with AG 19 or/and AG 20: IP54  
 OaP with AG 45: IP54  
 OaP with roller counter of the M5 series: IP54  
 OaP with pointer indicator: IP54  
 according to IEC 529 / EN 60529

### 7.2.4 Electromagnetic Compatibility

Only for devices with pulse pick-up:

DIN EN 61000-6-3, DIN EN 61000-6-2

Electromagnetic compatibility can only be warranted when the electronics housing is closed.

## 7.3 Process conditions

### 7.3.1 Operating temperature

### 8.5 Electrical Connection

Electrical connections are housed in the terminal box.

#### AG 19 and AG 20

devices to be connected	acc. to DIN EN 60947-5-6 (NAMUR) and Ex-approval
control line	up to 50 Ohm/wire AG 19: 2-wires, shielded AG 20: 4-wires, twisted in pairs
line connection	M 20x1,5

#### AG 45 with pre-amplifier PV11

devices to be connected	acc. to DIN EN 60947-5-6 (NAMUR) and Ex-approval
control line	up to 50 Ohm/wire 2-wires, shielded (channel I+II 4-wires), twisted in pairs; shield in blue colour
line connection	M 20x1,5

#### IG 2

devices to be connected	acc. to DIN EN 60947-5-6 (NAMUR) and Ex-approval
control line	up to 50 Ohm/wire 2-wires, shielded
line connection	M 20x1,5

#### KSN

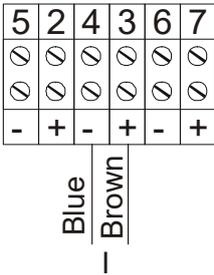

devices to be connected	acc. to DIN EN 60947-5-6 (NAMUR) and Ex-approval
control line	up to 50 Ohm/wire 2-wires, shielded
line connection	M 20x1,5

**Attention**

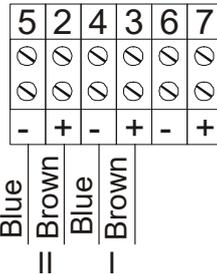

When installed in areas with potentially explosive atmospheres observe the respective country specific regulations (for Germany: EN 60079-14 resp. VDE 0165).

## 9. Display

### Single Pointer Indicator E:

The Single Pointer Indicator E displays the volume mechanically. This series is equipped with an adding-up roller counter with 6 digits roller (no zeroing lever). The Single Pointer Indicator may be combined with the pulse pick-ups described above.

### Double Pointer Indicator D:

The Double Pointer Indicator D displays the volume mechanically. This series is equipped with an adding-up roller counter (with zeroing lever). The Double Pointer Indicator may be combined with the pulse pick-ups described above.

### Roller Counters of the M5 Series:

The Roller Counters M5, M5B, M5V and M5BV display the volume of the media and may be equipped with a receipt printer and valve control. They can be supplied with the actuation device at the bottom (rotating), upright or diagonal. With the actuation device at the bottom, several roller counters can be mounted above the oval wheel meter. All models are available with an upright or sloping face.

## 9.1 General

The counters are adjusted to the operation conditions specified in the order form. The pre-set values are listed in the configuration sheet attached.

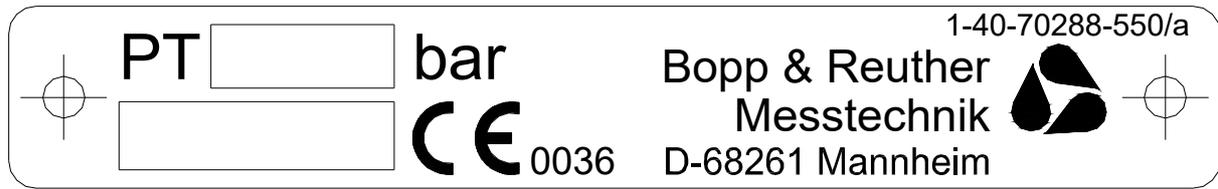

## 10. Safety Information

1. Oval wheel meters are high-precision and reliable volumetric measuring devices. They should only be used for their intended purpose. Always observe the pressure and temperature limits stated on the type plate (see Appendix), as well as all other technical data and safety information during device installation, start-up and operation.
2. Always observe national and international regulations concerning the operation of devices and systems under pressure.
3. Prior to installation, the operator has to ensure that the pressure bearing parts have not been damaged during transportation.
4. The devices have to be installed, operated and serviced by qualified personnel. The operator has the responsibility to ensure that the personnel have received sufficient and appropriate training. In case of doubt, please contact the manufacturer.
5. Only measure liquids to which the materials of the pressure bearing elements are resistant.
6. Carefully select gaskets or sealing elements according to the operating instruction specifications.
7. The tightening torques for the screw connections at the cover and lower part of the housing, as well as for the flange connections in the pipework are available on request.
8. The sensors (for the pulse pick-up and, if necessary, for the temperature measurement) should only be replaced once it has been ascertained that the meter is depressurised.
9. Type plates with pressure relevant information

Additional type plate at the flange connection with CE0036 mark.

The used abbreviations have the following meaning:

PT: Achieved test pressure and test date

D-67346 Speyer

## Appendix

### A. Troubleshooting / Error Detection

The Oval Wheel Meter including pulse pick-up and mechanical counters do not require servicing. If a malfunction or incorrect measuring occurs, check the installation conditions mentioned in chapter 7.1.

#### **Warning!**

When working on electrical connections, observe local regulations and all safety instructions in the operating instructions.

For Ex-devices all information and regulations from the Ex-documentation are to be observed in addition to the above. In the following possible malfunctions are described as well as necessary steps to eliminate them.

#### **General:**

If the reason for the malfunction cannot be identified ask Bopp & Reuther Messtechnik customer service department for help or send the device for repair to Bopp & Reuther Messtechnik (see appendix B2).

### B Servicing, Cleaning and Repair / Hazardous Media

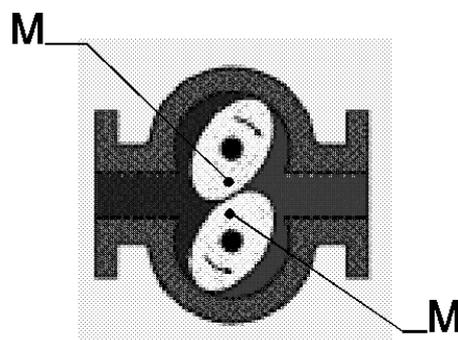

#### **B.1 Servicing, Cleaning**

If the Oval Wheel Meter will not be in operation for a longer period of time, it has to be dismantled, thoroughly cleaned and conserved with acid-free oil. Oval Wheel Meters used for liquid food may not be preserved in this way. In- and outlet are to be covered with caps. Make sure to store the Oval Wheel Meter in a dry room.

#### **Cleaning of the Oval Wheel Meters used for liquid food**

The oval wheels have to be dismantled if the pipes are flushed with hot water.

- Loosen tommy nut of the casing cover, lift casing cover with pressure screws, pull off oval wheels from axle, handle with great care, do not place on stone floors, use support made of wood or rubber material.
- When mounting, put on the oval wheels toothed in, i.e. in a way that the M marks on the wheel face face each other. Turn the oval wheel manually to make sure they are properly inserted (once). When inserting the gaskets, make sure it fits precisely.

## B.2 Repair / Hazardous Media

Before sending the Oval Wheel Meter to Bopp & Reuther, make sure to observe the following:

- Attach a note describing the malfunction, state the application field and the chemical/physical properties of the media (please find the respective form in appendix C1).
- Remove all residues of the media and pay special attention to sealing grooves and slits. This is of extreme importance if the medium is hazardous to health, i.e. caustic, toxic, carcinogenic or radioactive etc.
- Please do not return the device if you are not perfectly sure that all media hazardous to health have been cleaned off.

Costs incurred due to inadequate cleaning of the device and possible costs for disposal and/or personal injuries (causticization etc.) will be billed to the operating company.

Please ask our customer service for help and advice if your Oval Wheel Meter does not work properly:

### D.3. EU- Declaration of conformity

## EU - Konformitätserklärung EU - Declaration of conformity UE - Déclaration de conformité

Hiermit erklärt der Hersteller in alleiniger Verantwortung, dass die nachfolgend bezeichnete Baueinheit den Anforderungen der zutreffenden EU-Richtlinien entspricht. Bei nicht mit uns abgestimmten Änderungen verliert diese Erklärung ihre Gültigkeit.

*The manufacturer herewith declares under sole responsibility that the unit mentioned below complies with the requirements of the relevant EU directives. This declaration is no longer valid if the unit is modified without our agreement.*

Par la présente, le fabricant déclare que les appareils décrits ci-dessous, correspondent aux exigences de la réglementation UE qui les concerne. Toute modification des appareils sans notre accord entraîne la perte de validité de cette déclaration de conformité
